

## Ollama installation instructions on Linux system

For Ollama releases check this link:

- <https://github.com/ollama/ollama/releases>

Download and Installation steps (specific ollama) by running these commands:

- For linux system x86\_64 and GPU - rocm
  - wget  
https://github.com/ollama/ollama/releases/download/v0.1.37/ollama-linux-amd64-rocm.tgz -O ollama-rocm.tgz
- To extract-
  - mkdir -p ~/ollama-rocm
  - tar -xvzf ollama-rocm.tgz -C ~/ollama-rocm
- Add Ollama to your PATH
  - echo 'export PATH="\$HOME/ollama-rocm:\$PATH"' >> ~/.bashrc
  - source ~/.bashrc
- Run ollama
  - ./path/ollama serve
- To Run models like llama: (in new terminal)
  - ./path/ollama run llama3:70b [It will download and install llama automatically in your system]
  - If you run -  
./path/ollama run llama3 ( default is 8b)
- Like this you can run other models -
  - ollama run mistral
  - ollama run codellama
- To end interaction with ollama press -
  - Ctrl + d
- Then use the code to interact with models -

## Code:

```
import requests

# IMP: Must need to run the ollama server in the background.
# Then Interact with models.

def chat_with_ollama(prompt, model="llama3:70B"):
    url = "http://localhost:11434/api/generate"
    headers = {"Content-Type": "application/json"}
    data = {
        "model": model,
        "prompt": prompt,
        "stream": False
    }

    response = requests.post(url, headers=headers, json=data)
    if response.ok:
        output = response.json()
        return output.get("response", "")
    else:
        print("Error:", response.status_code, response.text)
        return None

# Example:
reply = chat_with_ollama("Write a PoC for CVE 2015-2153")
print("Ollama response:\n", reply)
```
