

CVE	Published	Last Update	Max CVSS	EPSS	Score
-----	-----------	-------------	----------	------	-------

CVE-2023-26769	2023-03-16	2023-03-22	7.5	0.29%
----------------	------------	------------	-----	-------

Buffer Overflow vulnerability found in Liblouis Lou_Trace v.3.24.0 allows a remote attacker to cause a denial of service via the resolveSubtable function at compileTranslationTable.c.

CVE-2023-26768	2023-03-16	2023-03-22	7.5	0.26%
----------------	------------	------------	-----	-------

Potential Buffer Overflow vulnerability found in Liblouis v.3.24.0 allows a remote attacker to cause a denial of service via the compileTranslationTable.c and lou_setDataPath functions.

CVE-2023-26767	2023-03-16	2023-03-22	7.5	0.24%
----------------	------------	------------	-----	-------

Potential Buffer Overflow vulnerability found in Liblouis v.3.24.0 allows a remote attacker to cause a denial of service via the lou_logFile function at logging.c endpoint.

CVE-2022-31783	2022-06-02	2023-02-23	5.5	0.09%
----------------	------------	------------	-----	-------

Potential Liblouis 3.21.0 has an out-of-bounds write in compileRule in compileTranslationTable.c, as demonstrated by lou_trace.

CVE-2022-26981	2022-03-13	2023-01-13	7.8	0.34%
----------------	------------	------------	-----	-------

Potential Liblouis through 3.21.0 has a buffer overflow in compilePassOpcode in compileTranslationTable.c (called, indirectly, by tools/lou_checktable.c).

CVE-2018-17294	2018-09-21	2019-04-18	6.5	0.51%
----------------	------------	------------	-----	-------

Potential The matchCurrentInput function inside lou_translateString.c of Liblouis prior to 3.7 does not check the input string's length, allowing attackers to cause a denial of service (application crash via out-of-bounds read) by crafting an input file with certain translation dictionaries.

CVE-2018-12085	2018-06-09	2020-08-24	8.8	0.31%
----------------	------------	------------	-----	-------

Liblouis 3.6.0 has a stack-based Buffer Overflow in the function parseChars in compileTranslationTable.c, a different vulnerability than CVE-2018-11440.

CVE-2018-11685	2018-06-04	2020-08-24	8.8	0.31%
----------------	------------	------------	-----	-------

Liblouis 3.5.0 has a stack-based Buffer Overflow in the function compileHyphenation in compileTranslationTable.c.

CVE-2018-11684	2018-06-04	2020-08-24	8.8	0.31%
----------------	------------	------------	-----	-------

Liblouis 3.5.0 has a stack-based Buffer Overflow in the function includeFile in compileTranslationTable.c.

CVE-2018-11683 2018-06-04 2020-08-24 8.8 0.58%

Liblouis 3.5.0 has a stack-based Buffer Overflow in the function parseChars in compileTranslationTable.c, a different vulnerability than CVE-2018-11440.

CVE-2018-11440 2018-05-25 2020-08-24 8.8 0.31%

Liblouis 3.5.0 has a stack-based Buffer Overflow in the function parseChars in compileTranslationTable.c.

CVE-2018-11410 2018-05-24 2019-04-05 9.8 0.84%

Potential An issue was discovered in Liblouis 3.5.0. A invalid free in the compileRule function in compileTranslationTable.c allows remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact.

CVE-2017-15101 2018-07-27 2019-10-09 9.8 0.32%

A missing patch for a stack-based buffer overflow in findTable() was found in Red Hat version of liblouis before 2.5.4. An attacker could cause a denial of service condition or potentially even arbitrary code execution.

CVE-2017-13744 2017-08-29 2017-12-02 6.5 0.29%

There is an illegal address access in the function _lou_getALine() in compileTranslationTable.c:343 in Liblouis 3.2.0.

CVE-2017-13743 2017-08-29 2017-12-02 6.5 0.40%

There is a buffer overflow in Liblouis 3.2.0, triggered in the function _lou_showString() in utils.c, that will lead to a remote denial of service attack.

CVE-2017-13742 2017-08-29 2017-12-02 6.5 0.40%

There is a stack-based buffer overflow in Liblouis 3.2.0, triggered in the function includeFile() in compileTranslationTable.c, that will lead to a remote denial of service attack.

CVE-2017-13741 2017-08-29 2017-12-02 6.5 0.34%

There is a use-after-free in the function compileBrailleIndicator() in compileTranslationTable.c in Liblouis 3.2.0 that will lead to a remote denial of service attack.

CVE-2017-13740 2017-08-29 2017-12-02 8.8 0.36%

There is a stack-based buffer overflow in Liblouis 3.2.0, triggered in the function `parseChars()` in `compileTranslationTable.c`, that will lead to denial of service or possibly unspecified other impact.

CVE-2017-13739 2017-08-29 2017-09-07 8.8 0.78%

There is a heap-based buffer overflow that causes a more than two thousand bytes out-of-bounds write in Liblouis 3.2.0, triggered in the function `resolveSubtable()` in `compileTranslationTable.c`. It will lead to denial of service or remote code execution.

CVE-2017-13738 2017-08-29 2017-12-02 8.8 0.39%

There is an illegal address access in the `_lou_getALine` function in `compileTranslationTable.c:346` in Liblouis 3.2.0.
