

## [CVE-2023-0804](#)

Potential exploit

LibTIFF 4.4.0 has an out-of-bounds write in tiffcrop in tools/tiffcrop.c:3609, allowing attackers to cause a denial-of-service via a crafted tiff file. For users that compile libtiff from sources, the fix is available with commit 33aee127.

## [CVE-2023-1916](#)

Potential exploit

A flaw was found in tiffcrop, a program distributed by the libtiff package. A specially crafted tiff file can lead to an out-of-bounds read in the extractImageSection function in tools/tiffcrop.c, resulting in a denial of service and limited information disclosure. This issue affects libtiff versions 4.x.

## [CVE-2022-0562](#)

Potential exploit

Null source pointer passed as an argument to memcpy() function within TIFFReadDirectory() in tif\_dirread.c in libtiff versions from 4.0 to 4.3.0 could lead to Denial of Service via crafted TIFF file. For users that compile libtiff from sources, a fix is available with commit 561599c.

[CVE-2019-7663](#)

Potential exploit

An Invalid Address dereference was discovered in TIFFWriteDirectoryTagTransferfunction in libtiff/tif\_dirwrite.c in LibTIFF 4.0.10, affecting the cpSeparateBufToContigBuf function in tiffcp.c. Remote attackers could leverage this vulnerability to cause a denial-of-service via a crafted tiff file. This is different from CVE-2018-12900.

[CVE-2018-17795](#)

Potential exploit

The function t2p\_write\_pdf in tiff2pdf.c in LibTIFF 4.0.9 and earlier allows remote attackers to cause a denial of service (heap-based buffer overflow and application crash) or possibly have unspecified other impact via a crafted TIFF file, a similar issue to CVE-2017-9935.

## CVE-2020-19143

### Description

Buffer Overflow in LibTiff v4.0.10 allows attackers to cause a denial of service via the "TIFFVGetField" function in the component 'libtiff/tif\_dir.c'.
